Data Strategy & Architecture Review

From a fragmented data estate to a strategy the executive team can own.

Format
Fixed-scope review

Duration
Four to eight weeks

Output
Written assessment, architecture direction, decision sequence

Commercial basis
Fixed fee

Sound familiar?

- Every function has its own platform, and every platform its own version of the truth.
- Reports that should agree don't.
- The AI plans assume data the organisation cannot actually produce.

This is a business conversation that needs technical depth to have correctly.

How it runs

What do we hold, who owns it, and what can we responsibly build on it?

- **Listen.** The people who produce the data and the people who depend on it.
- **Review.** Architecture, governance, ownership and the structures around them.
- **Name.** A governance and ownership model that says who decides.
- **Sequence.** What to fix first, what to stop buying, what becomes possible.

What you receive

- What you hold
- What condition it is in
- Who decides
- What to stop buying

What changes

Before	After
Data as a permanent programme.	→ **Data as a capability.**
Reports that should agree, and don't.	→ **A written account of what you hold and its condition.**
Nobody sure who decides.	→ **An ownership model that names who decides.**
Spending continues, confidence does not.	→ **A sequence: what to fix first, what to stop buying.**

Done before

27PB — across 200+ platforms, on a modernisation programme with £800m of potential value identified.
Telecoms

17 — times one process asked for the same postcode. There were no master records and no conventions.
Telecoms

First — e-GIF web service from a UK government agency: the definitive register of learning providers.
Education, government

One conversation.

No obligation. The right fit matters more than the right brochure.
