Cybersecurity & Risk Strategy

A risk posture that matches actual exposure, not a compliance exercise dressed as security.

Format
Fixed-scope review or board advisory

Duration
Typically four to six weeks

Output
Written risk assessment and prioritised recommendations

Commercial basis
Fixed fee

Sound familiar?

- The security tools are bought and the policy document exists.
- Nobody at board level can say what the actual exposure is, or what it would cost if realised.
- The board is being asked to sign off spend it cannot independently assess.

A risk nobody at board level understands is a risk nobody is managing.

How it runs

Proportionate, theatre, or a real gap.

1. **Assess.** Risk posture against actual exposure, not a generic framework.
2. **Sort.** Where controls are proportionate, where they are theatre, where a gap sits.
3. **Translate.** Technical risk in terms a board can weigh against other priorities.
4. **Prioritise.** Recommendations sized to actual impact.

What you can say afterwards

- What is exposed
- What it would cost
- What is being accepted
- What to do first

What changes

Before		After
Spend justified by fear or fashion.	→	**Spend justified against real exposure.**
Recommendations sized to vendor enthusiasm.	→	**Recommendations sized to actual impact.**
Risk accepted because nobody noticed.	→	**Risk consciously accepted, or managed.**
Reporting that falls over at a direct question.	→	**Board reporting that survives one.**

Done before

CISO and CSO: security posture across engagements, and regulatory audits across outsourced businesses.
Outsourcing and consulting

Research IP protected at a UK university: new security stack, awareness training, full vulnerability remediation.
Higher education

99.9999% availability across global sites, on secure infrastructure with recovery plans tested for real.
Defence manufacturing

One conversation.

No obligation. The right fit matters more than the right brochure.
