Non-Executive Director

Independent board-level scrutiny of technology, AI risk and digital change.

Format
Non-executive directorship

Commitment
Typically 1–2 days a month, plus committees

Committees
Audit and risk, M&A technology scrutiny

Commercial basis
Annual fee

Sound familiar?

- Technology has become material to the risk register, and no one at the table can interrogate it independently.
- AI is being adopted faster than it is being governed.
- An acquisition, a transformation or a regulatory change is approaching, and the board's view rests on what the executive team chooses to present.

A board that cannot interrogate its own technology dependencies cannot govern the risks they carry.

How it runs

Challenge and support, in that order when it matters.

Typically one to two days a month, plus committees

Committees

Audit and risk. M&A technology scrutiny.

Where the scrutiny falls

Cyber resilience | Data sovereignty | Vendor dependency | Acquisitions and AI governance

What changes

Before		After
Technology arrives at the board as a finished recommendation.	→	**A decision the board genuinely makes.**
A view that rests on what the executive team presents.	→	**An independent view the executive team respects.**
Risks surface after they have matured.	→	**Risks named before they are authorised.**
Technology simplified into uselessness.	→	**Commercially legible judgement, and questions that change what gets signed.**

What this draws on

Advised the non-executive board of a UK challenger bank, as its fractional CTO.
Financial services

Audit and Risk Committee accountability, across data, AI and cloud.
Telecoms

CISO and CSO earlier in the career, with regulatory audits across outsourced businesses.
Outsourcing and consulting

One conversation.

No obligation. The right fit matters more than the right brochure.
