Public Sector Technology

Senior technology leadership shaped by thirty-nine years inside how public sector decisions actually get made.

Format
Fractional, interim or advisory

Location
Remote and on-site, UK

Sectors
Five across the public sector

Commercial basis
Day rate, retainer or fixed fee

Sound familiar?

- A programme is moving through governance built for accountability rather than speed.
- Delivery partners promise timelines that assume a private-sector decision cycle.
- The technology leadership in the room has never worked inside it before.

The barriers are as often organisational and political as they are technical.

How it runs

Shaped for how public sector decisions actually get made.

- **Join.** Alongside existing teams, not above them.
- **Translate.** Between technical delivery and the governance, funding and accountability around it.
- **Test.** Timelines against how decisions are actually made.
- **Hold.** Delivery partners to account, from someone who has sat on their side.

Where this applies

Central government | Health | Justice | Education | Home affairs

What changes

Before		After
Timelines that ignore governance reality.	→	**Timelines tested against how decisions actually get made.**
Months lost relearning what the sector already knows.	→	**Leadership that does not need the context explained.**
Politics discovered mid-delivery.	→	**Political and organisational dynamics named up front.**
Delivery partners going unchallenged.	→	**Partners held to account by someone who has been one.**

Done before

2005 and still running: the definitive register of UK learning providers.
Education, government

5-year strategy built from published government policy, across home affairs and criminal justice.
Home affairs and justice

Won a full borough ICT contract from the incumbent, then delivered it end to end.
Local government

One conversation.

No obligation. The right fit matters more than the right brochure.
